

MSR-02/M-05 – Mobile Sensing/ 3D Mapping

Exercise

Felix Esser & Manuel Mittelstedt

Exercise 01 - 3DSensors and PointClouds

- Understanding the working principles of 3D sensors and influences on measurement errors.
- Learn to process and compare point clouds. Getting a sense of how the properties of point clouds from various sensors differ.

Exercise 01 – 3DSensors and PointClouds

General questions

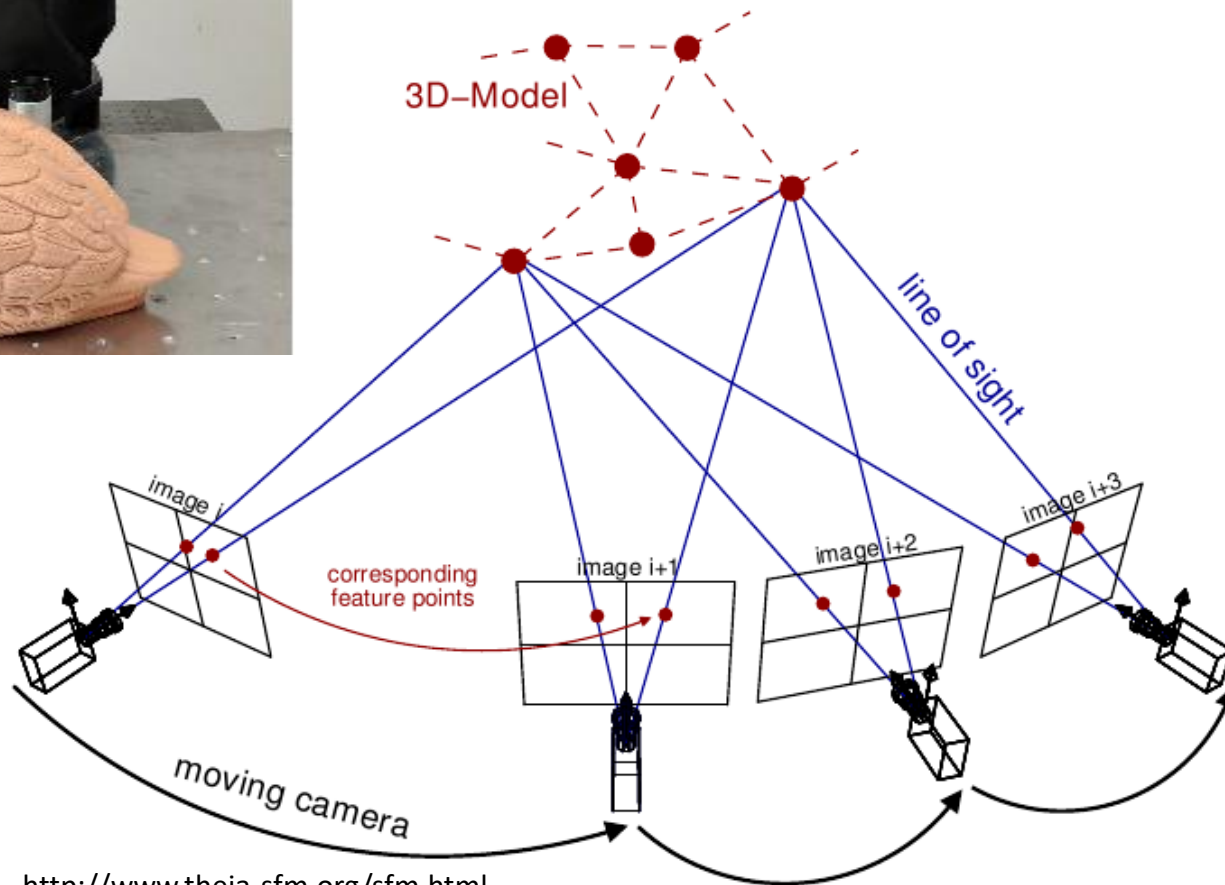

- You will find the answers to the questions by studying the lecture in detail. No further literature research is necessary.
- Please keep it short! Keywords or a few sentences are sufficient.

Coding part

- Data is provided which can be downloaded via a sciebo link.
- The library open3D is used for a large part of the exercise (<https://www.open3d.org/>)

Exercise 01 - 3DSensors and PointClouds

Data - 3D reconstruction with camera

Exercise 01 - 3DSensors and PointClouds

Data - 3D scanning with measuring arm
